

## Middleware as a Service

**Oracle SOA Cloud**

**Oracle SOA on AWS**

**Oracle Fusion Apps on  
AWS**

- Ebizoncloud Oracle Fusion Applications and Oracle Fusion Middleware Hosting Service revolutionizes the way in which businesses deploy and support Oracle Fusion technologies. By delivering Oracle Fusion Middleware and Fusion Applications on cloud Infrastructure as a Service (IaaS), and by changing the way in the application is installed, maintained, and delivered, Ebizoncloud enables enterprises to operate complex solutions at much greater efficiencies.
- Leveraging Amazon Web Services Cloud IaaS platform, and technical expertise developed over a decade of managing Oracle technologies, Ebizoncloud Oracle fusion applications and Oracle Fusion middleware Hosting Service delivers better performance, increased security, and greater reliability than traditional hosting services. The Ebizonclouds Hosting Service also delivers a significantly lower cost of ownership when compared to traditional hosted services or in-house corporate systems.

### **Disaster Recovery Solutions**

Enterprise customers can benefit from Amazon Web Services' widely dispersed data centers by choosing a primary site and a disaster recovery site from 10 regions around the globe. Ebizoncloud provides solutions to deploy Highly Available Oracle Fusion middleware and Oracle Fusion Applications in the cloud, at a fraction of the cost of traditional DR solutions.

### **Applications & Database Administration**

Ebizoncloud Administration services are backed by highly qualified staff. We pride ourselves on our ability to partner with our clients to offer flexible solutions for their Oracle Fusion Middleware, Oracle Fusion Applications, and database hosting needs. From strong SLAs, to robust disaster recovery and backup strategies, Ebizoncloud manages all the cloud and application infrastructure so that our clients can concentrate on their core business.
